I Innovation in therapy and diagnosis - that is what we are committed to.

Leading medical technology companies worldwide rely on our 3D tracking technology – we have been the global market leader in this field for over 20 years. Our expertise as an innovative high-tech company for the realization of modern, digital solutions in medical application fields is a central component of our success.

INSIDE

People work for NDI at four locations worldwide. The cultural diversity in our globally active company and the demands of the high-tech medical industry make for a stimulating work environment. The knowledge, enthusiasm and experience of our employees are essential to our success. And everyone knows everyone by name – including our colleagues in Canada, the USA and Hong Kong. We trust each other, are honest with each other and can celebrate with each other. And we do it across hierarchies – that's what makes work fun!

TASKS

In our Research & Development department, we develop new technologies for the production and testing of sensors and tools. To do this, we need you to support our team:

- Understanding requirements for applications for customers and translating these into a technical concept is familiar territory to you.
- You will also clarify the selection and procurement of materials with our suppliers, organize prototype construction and test initial samples.
- You release newly developed products: for us, this specifically means carrying out verification and validation, naturally considering the requirements in the medical environment in accordance with ISO 13485
- The determination of technical data for project specifications and data sheets is in your hands, as well as the creation of documentation for testing and our production.
- We also look forward to your support in change management!

PROFILE

- After completing your bachelor's or master's degree in process engineering, science, arts or engineering, you have already worked in development for several years.
- Dealing with different issues and finding solutions is a challenge you enjoy. For us, that would be joining/adhesive technology, plastics, electronics, assembly, and connection technology, plug connections, data cables, measurement technology and, of course, sensor technology.
- You feel comfortable in multidisciplinary teams and appreciate working in a hybrid project environment.
- You have a very good command of German and English to be able to communicate with our colleagues, customers, and suppliers all over the world.
